Job Objective:

Highly meticulous and focused Database Administrator seeking a mid-level position with 'XYZ Organization' to use my strong background and exceptional understanding of database system for timely completion of projects to meet company objectives.

Summary of Skills

- Good understanding of the relational database model with implementation techniques along with theoretical background of NoSQL databases
- Comprehensive knowledge of SQL, various programming languages, and ways to optimize SQL in projects
- Extensive experience in designing, coding, and supporting database solutions using Oracle server, and Microsoft SQL Server environment
- Familiar with database-backed web solutions by implementing proper data security, backup,

and recovery measures to protect confidential information

- Excellent organizational, and analytical skills
- Team player and good people skills

Work Experience

Junior DBA

- Performing troubleshooting, administration, monitoring, tuning, and operational functions on Oracle databases for multiple projects
- Writing and troubleshooting database procedures, functions and triggers to optimize the results given by company software
- Proactively responding to database alerts by installing, upgrading, migrating and configuring SQL servers to resolve issues
- Managing duties like troubleshooting, tuning input/output to enhance database performance
- Working with DBA team members to provide client requirements, and suggestions to the developer team related to database activities

Junior DBA

Hylink Tech Solutions, Kansas City, MO March 2018 – July 2020

- Ensured regular operation and availability of SQL server database, and tuning of databases for optimal performance
- Developed and maintained in-depth understanding of the database architecture as well as the functionality used to maintain data integrity
- Provided weekly, monthly, and quarterly database checklist with the current trending reports to help e-commerce clients improve user-experience
- Consistently updated and improved program module codes to enhance the performance of database management system
- Designed user-friendly graphical interfaces for quick, and easy access of the client websites increasing page hits by 45%
- Took responsibility to investigate potential problems and issues raised by business clients to provide quick and reliable solutions

Associate Software Engineer

Hylink Tech Solutions, Kansas City, MO

October 2011 – February 2014

- Worked in team responsible for managing and administering SQL server instances installed on Windows operating system
- Performed duties associated with multiple databases related to consistency checks, and took responsibility to do regular data backups on the server
- Created custom database reporting tools by coding frequently used modules, procedures, macro functions, and repeated queries in PL-SQL
- Proposed conversion of Oracle PL-SQL code to Perl CGI web application for client websites resulting in platform independence, and decreased percentage of missing data
- Coordinated with team for different projects to monitor product life cycle, and performed tests for configuration or installation
- Performed daily Microsoft SQL server support activities including backup of database and recovery of sensitive data in case of system failure

Education

- Bachelor's Degree in Computer Engineering
University of Missouri, Kansas City, MO
2010

Certification:

- Oracle Database 11g Administrator Certified Associate, 2015

Microsoft SQL Server Database Certification,
2013
