12-month FTC

Manchester or Peterborough

Heard of us?

We're an award-winning bank; backing people to fulfil life's hopes and dreams.

Now is your chance…

Join a skilled team of Database Administrators, who are responsible for looking after the whole Database environment, with help and support of our Outsource Team, in relation to DBA related tasks.

The role of Database Administrator is really important to us. You will be an experienced SQL Server and Oracle Database, with a strong technical set. You will be able work in a challenging and fast-moving environment. As DBA, you will be able to bring your own ideas to management, and actively goal-seek applying best practices. There may also be a requirement to work out of hours on a few occasions.

When the time is right, we would love to welcome you to our Manchester office. In the meantime, you will be based remotely. You'll be made to feel part of your new team by your Line Manager and colleagues through regular contact and virtual interaction.

What would your day look like?

- Ensuring the continued health, data integrity and uptime of the Bank's multiple database systems, including backup management, service availability, DR management
- Proactive enhancement, refinement and ongoing general upkeep of the database estate
- 2nd/3rd Line DBA support to business-critical databases
- MS SQL administration, backup and restore, maintenance automation with Ola Hallengren/TDPMon scripted solutions
- Management, upkeep, creation and specification of DR solutions, including MSSQL Clustering, AlwaysOn AG/FCI, mirroring and log shipping technologies

- Large MSSQL estate management of versions from 2000 to 2019, using toolsets to simplify management
- Upkeep and management of Oracle Database server 10/11/12g
- MSSQL consolidation
- Data warehousing support
- SQL reporting and OLTP performance triage and optimisation
- Database availability support, monitoring of critical database and related services
- Project involvement acting as an SME inputting into High- and Low-level design and attending technical design authority to provide input
-
-

Qualifications

- Production RDBMS (Relational Database Management System) support for SQL Server and Oracle RDBMS systems, including support of DR providing technologies.
- Competency in performance troubleshooting and in RDBMS solutions design utilising latest technologies,
- 3rd party management and tools such as PowerShell tooling
